

Company Profile

ALL PUMPS SUPPLIES
Inc. All-Pumps Pollution Services
42-44 Dunorlan Rd, Edwardstown
PO Box 135, Melrose Park
South Australia, 5039
p (08) 8275 8000
f (08) 8275 8099

All Pumps Supplies was founded in 1977 to answer the need for a versatile and service orientated specialist pump supplier to accurately assess each application and source the best possible solution without being limited to the range of any particular manufacturer.

Since that time, **All Pumps Supplies** has expanded its facilities and services and is now firmly established as a key supplier of the whole range of pumping equipment covering industry, Mining, Government and Municipal authorities, hydraulic and mechanical services, civil engineers and contractors.

The performance of any company can be measured by its ability to satisfy the rigorous demands of industry. **All Pumps Supplies'** Industrial Division has achieved this versatility over the years by:

importing - direct sourcing from overseas of key product lines to service the process, mining, chemical water treatment and food industries.

distributing - registered distributors and stockists of a vast array of Australian and imported product lines including exclusive agencies for South Australia of many key ranges.

manufacturing - a specialised range of engineered Packaged Pumping Systems and Chemical Treatment Plants to suit specific requirements, carried out with the strictest quality controls and in-house testing.

facilities - our Edwardstown facilities include 650m² of warehouse stocked with a very wide range of pumps, spares and accessories and a 180m² fully equipped service and fabrication workshop with gantry crane, including a dedicated pump test bay complying with Australian Standard 2417 part 2 Class C.

service - a technical service division supported by qualified personnel and two fully equipped site service vehicles, having the capacity to handle complete turn-key projects including mechanical and electrical installations, total refurbishments, site repairs and maintenance programs.

quality - a commitment to quality and customer satisfaction established over years, culminating in successful accreditation of our quality assurance system to ISO9002.

In the late 1980's, **All Pumps Supplies** established an Environmental Division in response to a growing awareness of health and environmental issues. This has overseen the development of a range of Water and Wastewater Treatment Packages and Pollution Control Systems including packaged pumping stations, potable water treatment packages, oil-water separators, trade waste treatment plants, stormwater diversion equipment, and chemical dosing systems. All of these systems are individually tailored using standardised designs to meet specific customer requirements and ensure compliance with relevant standards and statutory requirements.

All Pumps Supplies have a proven track record for fast and effective response to enquiries, reliable deliveries, competitive prices and an efficient after-sales service.

History

- * Established 1977
- * Built current premises 1982
- * Environmental Division formed 1986
- * Accredited to ISO 9002 by QAS 1996

Workshop Capabilities

- * All work quality assured to ISO 9002
- * Carbon steel, aluminium and stainless fabrication
- * Folding and rolling
- * Machining
- * Spray painting
- * Mechanical seal lapping
- * Pump mount ups and repairs
- * Electric motor repairs
- * Submersible pump overhaul and testing
- * Vacuum testing and nitrogen charging
- * Switchboard manufacture
- * Gantry crane
- * Test bay up to 180 L/s at 100 mtrs - conforms AS2417 part 2 class C

Site Installation and Service

- * Complete turn-key projects including civil, mechanical, electrical and instrumentation.
- * Installation of packaged pump stations including service and maintenance. Confined spaces entry certificate and equipment.
- * Pump installation, site servicing and maintenance.
- * Complete electrical contracting service including consumers mains and ETSA tests, and control switchgear fault finding and repairs.
- * Fully equipped service vehicles fitted with lifting equipment for submersible pump installation and service.
- * pH, redox, chlorine, ozone and chlorine dioxide plant installation, maintenance and calibration.
- * HDPE electrofusion, PVC, steel and copper pipework.

Design & Manufacturing Experience

- * Engineered pump skids up to 500mm diameter pipework, including electrics, instrumentation, valves and controls.
- * Diesel driven skids including fire pump sets to AS2419.
- * Variable speed packaged pressure systems up to 8 pumps, complete with all necessary electronic control equipment. Units are tested in-house, then installed and commissioned on site.
- * Water, sewage and effluent treatment plants, including chemical preparation, dosing systems, mixers, instrumentation and control loops. Site installation and commissioning.
- * Pollution control systems including effluent pumping stations, stormwater diversion, oil separators, pollution interceptors and trade waste treatment plants.

Pump Station Manufacture

Dedicated steel mould manufacture and complete fit-out of 1800mm diameter and 1200mm² precast concrete pump stations and 1000mm diameter and 600mm² GRC pump sumps. Capability up to 2400mm diameter pump stations. On-site installation including site works and electrical.

Major Clients

All Pumps Supplies have been suppliers to many major industrial and municipal clients throughout Australia, including the following:

Olympic Dam Operations

Southwark Brewery

Mitsubishi

Gerard Industries

BRL Hardy Wines

General Motors Holden

Monroe Australia

Coca Cola Bottlers

GH Michelle

Boulderstone Hornibrook

RAAF

Mobil Oil

Santos

GNB Australia

Ingham Chickens

BHP

Kimberly Clark Australia

WMC Kambalda W.A.

WIIvIC Nifty Copper

Aberfoyle Resources

Normandy Mining

Worsley Alumina

Pasminco Mine Sites

ICI Australia

Southcorp Wines

SA Water

United Water

Transfield

Australian Submarine Corp

CSR

Numerous Councils, Government Authorities and Water Boards in SA and Victoria

Recent Major Projects

Henry Walker - RAAF Apin Air Base water supply skid with 220kW of pumps, 500mm pipework, valves and controls, plus 10 x 15kW high pressure pumpsets.

Walleroo Council - Supply and installation of 5 twin pump effluent pump stations including concrete wells, pipework, valves, control equipment and switchgear.

Mt Barker Council - Design, installation and commissioning of chlorine dioxide disinfection system including residual analyser and associated pumping equipment.

Westfield Marion Shopping Centre - 8 x Spel Stormceptor's and sewer pump station.

Wirrina Holiday Resort - 3 x twin pump sewer pump stations and twin pump variable speed pressure system.

Transfield/BHP - Manufacture and supply of 10 x stainless steel pumpsets and 6 x submersible pumpsets for Reed Bed Project in Whyalla.

SA Water - Design, manufacture and installation of variable speed automatic pressure system for mains boosting at Cockatoo Valley.

C.B.I. - Manufacture and installation of filter backwash system at Myponga W.T.P.

Mitsubishi - Trade Waste Treatment Plant for paint line, including chemical transfer.

BHP World Minerals - 23 x Verderflex heavy duty peristaltic pumpsets including 2 x 125mm model VF125 pumps for Cannington Silver/Lead/Zinc mine.

WMC - Nifty Copper - 75kW high head dewatering pump for underground mine.

Boulderstone Hornibrook - Supply of mixers, submersible pumps and end suction pump for the 10 x Riverland Project Water Treatment Plants.

Aberfoyle Resources Gunpowder Expansion Project - Supply of 18 x Verderflex heavy duty peristaltic hose pumps for concentrated thickener underflow and sampling.

WMC - Olympic Dam Expansion Project - Supply of 6 heavy duty peristaltic pumps for 72% concentration slurry duties.

Henry Walker Environmental - Design, manufacture and supply 2 x multi-pump automatic pumping systems for Aldinga Sewage Treatment Plant, plus supply of sludge decanting pumps.

SA Water - Supply of 4 x 30kW ABS pumps for Picadilly Sewer Pumping Station.

SA Water - Design, manufacture and supply dual gas chlorination system to suit 6 x 990kg drums. System allows for closing of two water supplies proportional to both flow rate and residue.

Glenelg Water Board - Design, manufacture, install and commission 5 x hypo chlorine dosing stations, including civil works and monitoring/telemetry equipment.
